Interactive Projection on a Touch-sensitive Surface

Optional Wireless Communication

Mobile Stand

PolyVision's TS Series of Interactive Whiteboards transform classrooms into more productive learning environments by supporting curriculum resources and engaging students.

Keep Your Class Engaged

Dramatically improve group interactivity by allowing students to collaborate and become engaged in classroom activities. PolyVision's TS Series digitally captures any notes written or projected onto the board, so your students can focus on the lesson content rather than concentrating on taking notes.

Maintain Message Consistency

There is little room for miscommunication when all session participants have the same notes; simply save your work for later distribution in your format of

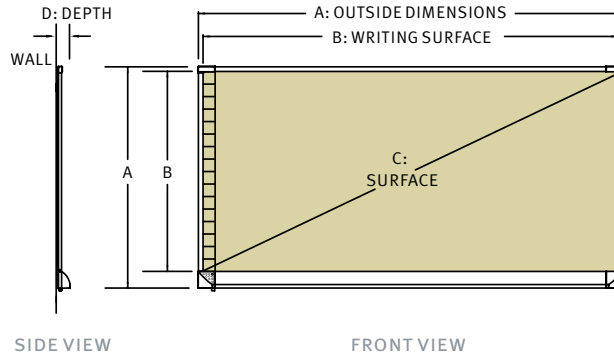

choice: via email, Internet, intranet, or printed copies.

Enjoy your Free Time

Teachers who prefer a digital presentation format to a written format often spend a lot of time creating an interactive experience for their students. The TS series helps to eliminate the time crunch by capturing notes and annotations on projected images, so it's easy to review the notes made during previous sessions and digitally update presentations accordingly - an ideal solution for educators involved in either an activity or extended unit of study.

TS Series Interactive Whiteboards: Present an interactive experience.
