

SonicWALL Anti-Spam Desktop

ENDPOINT SECURITY

Award-winning Anti-spam and Anti-phishing E-mail Protection

SonicWALL® Anti-Spam Desktop delivers anti-spam and anti-phishing protection for Outlook or Outlook Express e-mail clients on Windows-based desktops or laptops. With SonicWALL Anti-Spam Desktop, e-mail once again becomes a tool to enhance productivity—instead of a source of user frustration and a threat to security.

Each time a user opens an Outlook or Outlook Express client, Anti-Spam Desktop starts scanning and evaluating each e-mail arriving into one or more inboxes via Exchange, POP or IMAP. Anti-Spam Desktop queries the SonicWALL GRID Network and evaluates each message. It then places identified spam in a SonicWALL Junk Mail folder, phishing e-mail in a SonicWALL Phishing Mail folder, challenged e-mail (using the Challenge/Response option) in a Challenged Mail folder, and legitimate e-mail in the inbox.

- **Real-time protection**
- **Adversarial Bayesian filtering**
- **Anti-phishing protection**
- **Flexible protection options**
- **Challenge-response ready**

Features and Benefits

Real-time protection. SonicWALL Anti-Spam Desktop delivers accurate and up-to-date protection through real-time interaction with the SonicWALL GRID Network. Every day, this global network evaluates millions of e-mails to evaluate and determine the security reputation of senders, content, links, images, attachments and more, with unparalleled accuracy. Any newly-discovered spam is removed automatically from the inbox in real-time.

Adversarial Bayesian filtering. SonicWALL deploys an Adversarial Bayesian engine that not only examines the content, but also considers hundreds of other e-mail attributes to detect even the most subtle spammer tricks, resulting in a true and complete spam evaluation of each message.

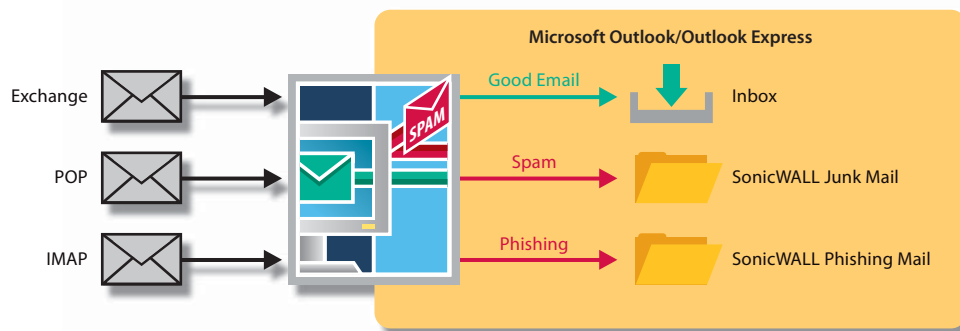

Anti-phishing protection. Anti-Spam Desktop offers the industry's only Bayesian Phishing engine, to detect phishing e-mail with unsurpassed accuracy. Anti-Spam Desktop places these dangerous e-mails in their own SonicWALL Phishing Mail folder. This unambiguous designation of phishing dramatically reduces the risk of having financial, personal or proprietary information lost through an e-mail-based phishing attack.

Flexible protection options. Users may personalize lists to block or allow e-mail based on e-mail address, domain name and mailing list. Users can fine tune the aggressiveness of message filtering based on the e-mail content (such as "Obscene Language" or "Advertising") or even the language type.

Challenge-response ready. SonicWALL Anti-Spam Desktop can challenge none, some or all of the e-mail messages received from unknown senders. Challenges can be text or a visual image and users can customize the "challenge" message.

Specifications

Easy to get started, easy to use

SonicWALL Anti-Spam Desktop

1-year subscriptions

SonicWALL Anti-Spam Desktop installs in minutes on a Windows-based desktop or laptop and immediately begins protecting Outlook or Outlook Express inboxes from spam and phishing e-mail. There are no rules you need to create, no lists to populate. SonicWALL Anti-Spam Desktop will continue to learn about the e-mail that is spam and it will become even more efficient at protecting each inbox.

If a spam message does get past SonicWALL Anti-Spam Desktop and into an inbox, a user simply selects the message, presses the "Junk" button and the message will be instantly removed from the user's inbox and placed in the SonicWALL Junk Mail box. SonicWALL Anti-Spam Desktop will also add the sender of the e-mail to a personal blocked list and the user will never receive a message from that sender again.

If a good message ends up in the SonicWALL Junk Mail folder, a user simply clicks on the message and selects the "Unjunk" button to immediately move the message to the inbox. SonicWALL Anti-Spam Desktop will also add the sender to the user's personal allowed list and the user will always receive messages from that sender.
