

Barracuda Backup Service

Barracuda Backup Server Models

Barracuda Backup Service is a complete and affordable data backup solution. The Barracuda Backup Server provides a full local data backup and deployment options including cloud storage and site-to-site replication for disaster recovery needs. This approach provides the best of both worlds - onsite backups for fast restore times and secure, offsite storage for disaster recovery. Block level deduplication is applied inline to reduce traditional backup storage requirements while also reducing backup windows and bandwidth requirements.

Barracuda Cloud Storage Service Plans

The Barracuda Backup Service can be deployed with Barracuda Cloud Storage Service to meet offsite backup and disaster recovery needs. Market-leading scalable and affordable cloud storage is allocated in 200 GB increments at a monthly rate of \$0.25/GB. A typical 20-50X storage savings over traditional backup methods is realized through advanced data deduplication and compression. A total storage footprint of approximately 1.5X a single full backup is sufficient to satisfy most retention needs.
