

# Transforming the Airline Industry

Surface is the device that pilots, flight attendants, and maintenance personnel need to stay connected to both their teams and real-time information. In the air or on the ground, Surface helps airlines meet operational requirements and deliver exceptional customer service.

## Electronic Flight Bag

Replace your traditional pilot's briefcase with a new electronic flight bag, powered by Surface. At a fraction of the weight and volume of paper publications, airlines save on fuel costs due to weight reductions and pilots gain access to real-time navigation information and critical third party apps like Jeppesen's FliteDeckPro.

Lightweight, durable, and portable devices with long lasting battery life

Mobile access to productivity tools and critical apps

Enterprise-grade security and manageability

Provides email, schedules, training and corporate update access to mobile teams

## Below the Wing

Engineers and maintenance crews need computing power to support the aircraft below the wing. Surface has the durability, performance specs, and battery life airline workers need in a robust, lightweight tablet.

Lightweight, durable and rugged device that withstands rigors of outdoor environments

Enables maintenance process automation and operational efficiency

Unique pen capabilities including click for OneNote with Surface Pen<sup>1</sup>

Lync, Skype and email help communicate between cockpit, terminal, and tarmac teams

Enterprise-grade security and manageability

The most productive devices for business

<sup>1</sup>Surface Pen comes with Surface Pro 4 and Surface Book. Sold separately from Surface 3.

## Staff Enablement

Airline service, whether at the curb or counter, in the lounge or in the air, is all about up-to-date information and personalized service. Surface enables the crew to engage more with their customers and connect with a distributed team.

2-in-1 form factor to leverage benefits of laptop and tablet

Respond to customer needs and touch points immediately

Enterprise-grade security and manageability

Access to real-time customer history and preference through centralized data

*"Delta's electronic flight bag running on Surface...continues the technological strides Delta has been making to give our crews the best tools to keep them flying safely and efficiently...This intuitive device puts key information at their fingertips right when they need it."*

- Capt. Steve Dickson,  
Delta Senior Vice President

## Accessories

### Cockpit Device Mount

Innovative mounting cases mount in the cockpit and power your device.

### Protective Mobile Sleeves

Built for durability and superior protection, mobile provide peace of mind.

### Customer-facing Kiosk

Enclosures turn Surface into a touch-friendly, secure customer-facing kiosk.
