

Trend Micro™

Worry-Free™ Business Security Hosted for Small Offices

Safer, Smarter, Simpler

Small businesses rely on the web to generate demand, service customers, and compete. However, doing so opens the door to a growing number of web threats that can steal private information, drain PC resources, and harm a good reputation. A web threat is any threat that uses the Internet to facilitate cyber crime. Employees can expose the business to web threats by simply visiting a compromised website.

Historically, small offices faced two choices: **1) inadequate consumer solutions** or **2) more complex centrally managed solutions**. Consumer antivirus solutions require extra effort to separately purchase, install, configure, and maintain for each PC. Centrally managed solutions save time and let you view which PCs and notebooks are protected, no matter where they are located. However, the trade off is the cost and maintenance of servers and software.

Protects Small Business from Web Threats

Protect multiple PCs from viruses, spyware, and other web threats with Worry-Free Business Security Hosted for small offices. With Worry-Free Business Security Hosted, you can centrally manage and check the status of protected computers anywhere. Trend Micro hosts the security software and the central web console, so you don't need a server or more server software. Trend Micro continually updates and maintains this small business solution for you.

Worry-Free Business Security Hosted

Powered by Trend Micro Smart Protection Network, is safer, smarter, and simpler, so you can stop worrying about security and focus on business.

Safer:

- Unique web threat protection defends business assets and customer information by stopping web threats before they reach PCs.
- Worry-Free Security is an integrated defense against web threats, and traditional malware (viruses, spyware and more) to prevent business disruption and data theft.
- Every day, Trend Micro tracks three billion websites, protecting customers from eight to ten million potentially dangerous websites.

Smarter:

- Web Threat Protection updates constantly, yet will not slow down computers as it stops threats from web.
- No configuration or maintenance is needed.

Simpler:

- Single-install security is specifically designed for small offices.
- One console, which you can access anywhere, checks virus protection for all computers, no matter where they are located.

Trend Micro Smart Protection Network

The Smart Protection Network is the core technology within Worry-Free Business Security Hosted that protects customers from Web threats. By combining Internet-based—or "in-the-cloud"—technologies with smaller, lighter-weight clients, you will have immediate access to the latest protection wherever and however you connect—from home, within your company's network or on the go. It's security made smarter.

eSecurityToGo, LLC

- “Trend Micro Worry-Free Business Security Hosted offers desktops and notebooks the same level of protection as an on-site solution, but without the trouble of setting up VPNs or configuring systems for roaming.”
