

TREND MICRO SMART PROTECTION SUITES

Connected, layered security for complete protection

Get smarter security that goes where your users go

Your users are increasingly accessing corporate resources from a variety of locations and devices. Since they are not always working on a corporate network, device, or application, it's incredibly challenging to protect them. To further complicate matters, you're moving to the cloud and need flexible security deployment options that will adapt as your needs change. And, with so much going on, you want to ensure centralized visibility across all layers of security.

Traditional security solutions just aren't keeping up with your users. Unfortunately, attackers ARE. To combat today's wide range of ever-evolving threats, you need connected security that consolidates your view across all threat vectors. And you need a forward-thinking, proven security vendor that can predict issues before they cause harm. It's time to think seriously about Trend Micro Smart Protection Suites.

Smart Protection Suites. Strong. Flexible. Easy to manage.

Trend Micro Smart Protection Suites are connected suites of security capabilities that protect your users no matter where they go or what they do. This proven security delivers the best protection at multiple layers: endpoint, application, and network using the broadest range of threat protection techniques available. Plus, you can evolve your protection using flexible on-premises, cloud, and hybrid deployment models that fit your IT environment today and tomorrow. And most importantly, you can manage users across multiple threat vectors from a single management console, giving you complete visibility of the security of your environment.

Better protection against malware, zero-day, and targeted attacks with Connected Threat Defense

Smart Protection Suites protect all user activities, reducing the risk of sensitive information loss. You'll get advanced protection with **endpoint security, email and collaboration security, web security, and mobile security**. The result is a protective shield that is extremely difficult for cyber criminals to penetrate.

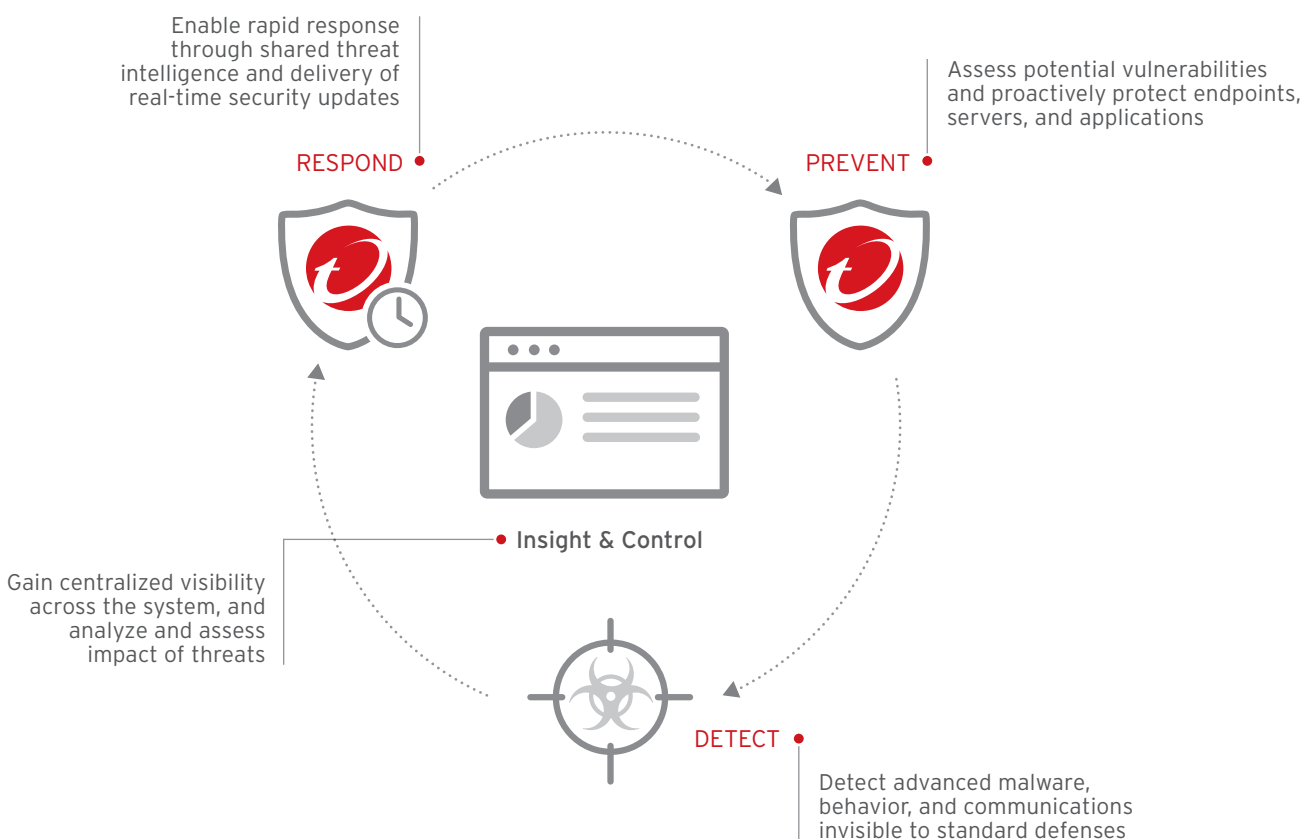

This multi-layered solution, integrated with Trend Micro™ Deep Discovery™ sandboxing, breach detection and endpoint sensor capabilities, delivers a Connected Threat Defense that covers the entire threat life cycle with multiple protection techniques:

PREVENT: Assess vulnerabilities to potential threats and proactively protect endpoints, servers and applications.

DETECT: Spot advanced malware, behavior and communications invisible to standard defenses.

RESPOND: Enable rapid response through the delivery of real-time signatures and security updates.

With User Protection, you get:

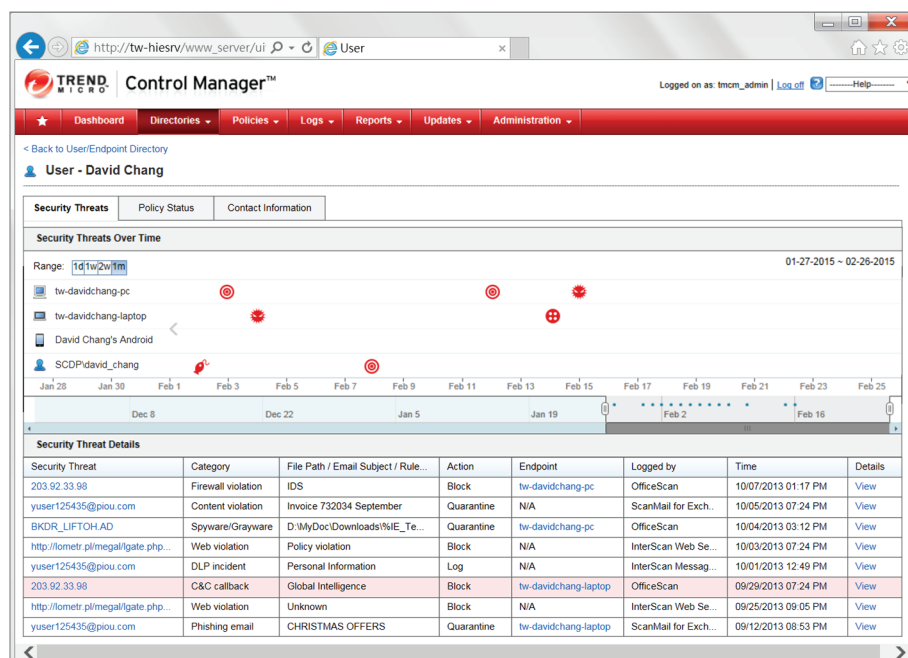

- **The broadest threat protection.** Includes a full range of integrated protection across gateways, endpoints, devices, servers, and applications. All across the network, you get multiple layers of anti-threat capabilities to protect against even the newest and most sophisticated threats.
- **Advanced threat protection.** In addition to world-class security fueled by global threat intelligence, you're protected by integrated threat sandboxing, command and control (C&C) detection, application control, behavior monitoring, anti-ransomware, and host intrusion protection.
- **Better protection of your information.** Integrated data loss prevention protects your information while endpoint and email encryption ensure only authorized eyes see your information. Application and port control prevent users from sending information where it doesn't belong.
- **Comprehensive view of user security.** You can manage all layers of security from a single management console for comprehensive analysis of data and threats throughout your environment.
- **Real-time connected threat intelligence.** Take your protection to the next level with threat insights from Trend Micro's threat defense experts and real-time updates from our global threat intelligence network.

Evolve dynamically with the flexibility of cloud, on-premises, or both

Trend Micro User Protection ensures maximum flexibility by providing multiple deployment models to best fit your IT strategy. You no longer need to make a choice between on-premises or cloud. With Trend Micro, you have the flexibility to choose the deployment model that fits you best, including a mix of on-premises and cloud. With single, user-based licensing that delivers multiple layers of protection for all of your users' devices, installation is streamlined and you can change your deployment model any time without additional costs. Rather than manage separate solutions for on-premises and cloud security, you can administer both from a single management console.

Bolster security and accomplish more in less time with central visibility and management

The Smart Protection Suites give you multiple layers of connected security that are managed from a single management console. You get a single view of all threat information for comprehensive visibility of user security in a timely and efficient manner. Plus, you'll be able to dive deeper with user-centric management that allows you to easily understand how threats are spreading for a particular user across multiple systems, over time. Plus, it's fast and easy to deploy and configure with only one solution to install and manage for multiple layers of protection.

Control Manager: View security events by user across all their devices

Gartner® names Trend Micro a Leader for 14 years in a row and now the furthest for Completeness of Vision

Protect users without impacting user experience

With the Smart Protection Suites, you can also count on stronger security that's lightweight so it won't impact the user experience, and it supports all of the devices and applications that your users want to use. Global threat intelligence from Trend Micro™ Smart Protection Network™ rapidly and accurately identifies new threats across all layers of security with real-time threat updates.

Smart Protection Suites are available in two options:

	Smart Protection for Endpoints	Smart Protection Complete
Central Management	✓	✓
On-premises, cloud, or Hybrid Deployment	✓	✓
24x7 Support	✓	✓
Integrated Data Loss Prevention	✓	✓
ENDPOINT		
Anti-malware	✓	✓
Vulnerability Protection	✓	✓
Virtual Desktop Integration	✓	✓
Mac and Windows Security	✓	✓
Server Security	✓	✓
Endpoint Application Control	✓	✓
Endpoint Encryption	✓	✓
Mobile Security and Management	✓	✓
EMAIL MESSAGING AND COLLABORATION		
Messaging Gateway		✓
Mail Server Security for Microsoft Exchange		✓
Mail Server Security for IBM Domino		✓
Instant Messaging Security for Microsoft Lync		✓
Microsoft SharePoint Security		✓
Security for Microsoft Office 365, Box, Dropbox		✓
WEB		
Secure Web Gateway		✓
