

LANDesk® Security Suite 9

Secure All of Your Deployed Systems

LANDesk® Security Suite safeguards your enterprise with:

- Whitelisting
- Blacklisting
- Application control, including host-based intrusion prevention (HIPS) functionality
- Personal firewall
- Patch management
- Process modeling and automation
- Antivirus, anti-spyware, and anti-malware features
- Third-party antivirus enforcement
- Device control
- Policy enforcement
- Data-loss prevention
- Dynamic, location-aware policies that detect trusted and untrusted networks
- Remote policy enforcement
- Microsoft® Windows® firewall management
- Network access control (802.1x)
- Asset discovery and inventory
- WAP discovery
- Real-time device discovery
- USB encryption
- Vulnerability detection and remediation
- Security configuration enforcement
- Compliance to standards such as:
 - Payment Card Industry Data Security Standards (PCI DSS)
 - Federal Desktop Core Configuration (FDCC)
 - Security Content Automation Protocol (SCAP)
 - Health Insurance Portability and Accountability Act (HIPAA)
 - Sarbanes-Oxley

Connect and Secure All the Links in Your IT Chain

These days, IT departments like yours are tasked with overseeing more security operations and process concerns than ever before. The number of threats, applications, wireless devices, and compliance demands is growing exponentially. What's frightening is that your infrastructure is only as strong as its weakest link.

Your infrastructure is a "chain" of links, from core servers to network servers and a myriad of devices—including desktops, laptops, and portable storage media. And the only thing more frightening than contemplating how under-protected some of these links are (USB drives, for example) is realizing that, from a security standpoint, many of them aren't even connected—at least not in a way that enables you to effectively manage their operations and process issues. (Think road-tripping laptops.) These links are just floating out in the ether, waiting to be either exploited or incorporated into the rest of your network chain and strengthened to the same level as the stuff you've already got under control.

We're pretty sure you'll agree the latter option is the way to go. Because when the inevitable security breach comes—whether it's data leakage, a virus, malware, spyware, or another form of malicious attack—you need to be able to react immediately. And the stakes couldn't be any higher: Failure to recognize and remediate problems as quickly as possible risks loss of invaluable proprietary data, irreparable brand damage, and significant capital loss from plummeting productivity—as well as possible fines and legal action in the case of customer data loss.

But it's more than that. Although lots of solutions on the market deal with these vulnerabilities, the fact that there are so many tools is actually part of the problem. Because when data is compromised, when weaknesses are exploited, when critical patches need distribution, you don't want to be hunting through 25 different consoles to find the one that'll close the loop.

That's why you need a single, comprehensive solution that integrates a personal firewall, patch management, application control, whitelisting, blacklisting, compliance assessment, and a host of other cutting-edge security solutions to keep your enterprise safe—all from one mighty console.

That's Why You Need LANDesk® Security Suite 9

Stellar security comes with stellar management of network endpoints, but you can't secure devices you can't discover. And let's face it—with the rising trend toward telecommuting and ever-more-portable storage media—this is getting harder, not easier. That's why you and your team are regularly working longer hours when you should be enjoying worry-free evenings and weekends.

But with LANDesk® Security Suite, your weekends will soon be your own again. LANDesk works with customers all over the world to understand and address your everyday concerns, things like enforcing policies on computers anywhere in the world and making dynamic changes based on whether those machines are connected to trusted or untrusted networks.

And that's not the half of it. LANDesk Security Suite makes comprehensive protection a reality with robust solutions in every major sector of your endpoint security needs.

Key Features

Integrated Endpoint Security

- **NEW LANDesk® Personal Firewall**—Limits access to authorized networks or IP addresses to ensure increased system protection and dramatically reduce the potential for effective system attacks
- **NEW Location-aware policies**—Preserve productivity and reduce the chance of data loss and infection with dynamic policies that adjust security settings—including application control, anti-malware configuration, and removable storage restrictions—based on the environment a selected machine is in
- **NEW Application and device control**—Uses a single, integrated agent that monitors, protects, and controls application and device usage on the endpoint

LANDesk® Personal Firewall

Compliance Assessment and Remediation

- **Comprehensive assessments**—Help you enforce alignment with compliance standards such as Payment Card Industry, SANS, NIST, NSA and others to support PCI DSS, FDCC, SCAP, HIPAA, and Sarbanes-Oxley
- **Robust reporting capabilities**—Include trend graphs and security policy and spyware reports
- **LANDesk® Network Access Control (optional)**—Works with LANDesk Security Suite to prevent compromised or noncompliant systems from connecting to the network until they have been fully remediated

Device Control

- **USB encryption policies**—Control use of mass storage devices by making them read-only, blocking them entirely, or forcing encryption
- **Advanced device management**—Oversees access to drives, modems, USB and communications ports, bridging networks, and wireless channels such as 802.11x and Bluetooth
- **Shadow-copy functionality**—Monitors files copied to peripheral devices to prevent data leakage on CD-ROMs, DVDs, and other portable media

“LANDesk has given us greater visibility, flexibility and control over the management and security of our endpoints, while significantly increasing our overall user satisfaction. It has been a great success for us.”

—Ranabir Dey
Director of IT
American Institute of Certified Public Accountants (AICPA)

“By being able to direct patch, spyware remediation, vulnerability scanning, and inventory control from a central interface, LANDesk® Security Suite has helped VCPI reach greater levels of security control and efficiency.”

—Joe Riesberg
Manager of IT Security and
Regulatory Compliance
VCPI

“We did an analysis of several different products and LANDesk came out way ahead. The different layers of security in LANDesk give us a lot of power and flexibility. Whether it's blocking a file or rolling out a patch, LANDesk enables us to address threats and keep our PCs secure.”

— Judy Brown
Senior Manager of IT Support
N.E.W. Customer Services
Company, Inc.

Key Features continued

Application Control

- **Host-based intrusion prevention (HIPS) functionality**—Adds zero-day and stealth-rootkit threat protection with behavior-based execution control and blocking that prevents malicious attacks on the host
- **Whitelisting and blacklisting**—Allows only authorized programs to run and stops unauthorized or prohibited applications—including on systems disconnected from the network—even if users rename the file
- **Seamless integration**—Ensures that application control features work in tandem with new personal firewall features
- **Group and user-level restrictions**—Offer greater control of who can access specific applications

Advanced Vulnerability Assessment and Remediation

- **Patch management**—Automatically identifies operating system and application patch needs using LANDesk's comprehensive vulnerability assessment and patch database; also shows what vulnerabilities a patch might introduce by revealing which patches depend on others
- **Custom settings**—Let you control which vulnerabilities and newly available definitions you receive alerts on; also lets you build custom patch packages to address any detected vulnerability and bring systems into compliance with company or industry standards
- **LANDesk® Targeted Multicast™ and LANDesk® Peer Download™ technologies**—Achieve a fully patched state across the enterprise more quickly and with minimal impact to the network
- **Standard, custom, and high-frequency scans**—Provide increased flexibility in controlling what you scan for and how often you scan for it
- **Hands-off deployment**—Automates the pilot and rollout phases of vulnerability assessment and patch deployment

LANDesk Antivirus, Anti-spyware, and Anti-malware Protection

- **Advanced protection**—Eases network burden and centralizes protection against spyware, adware, Trojan horses, keyloggers, and other malware
- **Award-winning LANDesk® Antivirus (optional)**—Integrates with LANDesk Security Suite to protect systems, including Microsoft Exchange Server 2007 from stealth rootkits and other forms of malware

Enforcement of Windows Firewall and Existing Antivirus Solutions

- **Third-party antivirus control**—Manages antivirus solutions from McAfee, Norton, Sophos, Symantec, Trend-Micro, CA, ESET, and Kaspersky
- **Microsoft Windows firewall management**—Identifies unprotected wired and wireless machines, and enables and configures Windows Vista® and Windows XP firewalls
- **Custom configurability**—Lets you set up one firewall for all systems or customize firewall configurations for individual systems or groups of systems

Beyond Security: Make IT the Precision Machine Powering Enterprise Success

When you've got a comprehensive toolset like what we've packed into LANDesk Security Suite, you don't just make IT an unbreakable chain securing the gateway to your organization—you also make it a precision-milled chain that reliably and continuously transmits power between all the crucial gears in the enterprise machinery. Rather than facilitating haphazard progress like a moped whose chain falls off periodically, an IT department running LANDesk Security Suite helps the enterprise function like a luxury Ducati racing bike. Because when endpoint security is optimized and systems are running at full capacity, the entire enterprise maintains productivity and progresses toward its business objectives.
