

Smart Storage Solutions for Government Organizations

Make the storage choice that enables you to start right, keep it simple, and build on your investment.

NetApp's affordable storage solutions for government enable your organization to deploy storage on a smaller, cost-effective footprint — with presized and validated systems that fit any budget, deploy in minutes, and readily adapt to changing requirements. There's no reason to settle for storage that's just "good enough" because you only need mid-size capacity or face budget limitations. Instead, get storage that's been proven in the harshest conditions on earth. And that can grow with the same unified architecture, OS, and software tools as our larger systems. Start right, keep it simple, and build on your investment. Your organization may not need storage that can withstand the temperatures of the desert, but there's no reason to risk the mission on anything else.

Key Points

- Eliminate sprawl and double utilization.
– slash IT costs by up to 50%
- Simplify Management.
– reduce overhead by 60%
- Enhance your Data Protection.
– reduce disruptions and downtime by 50%
- Scale as you Grow.
– provision in minutes, easily add capabilities
