Without a robust wireless network, you're hampering productivity. But if you don’t limit access, you could let in the bad with the good. It’s enough to make anyone a bit anxious. Luckily, we know just what it takes to make sure your network is accessible but not vulnerable. Having helped thousands of other companies, we have the expertise and the confidence to help find the right wireless solution for your business. And you won’t have to sacrifice security for mobility.
WITH FREEDOM COMES RESPONSIBILITY.

When you let your network go wherever your employees do, it will encounter new threats. Smartphones, tablets and notebooks are lost or stolen all the time and network access on these devices is often left unsecured. If a wireless device gets infected, it will quickly spread throughout the network. Plus, just the additional traffic on your network can slow things down. But we’re here to help you find the right solution and help ensure your network is strong enough and secure enough to handle whatever crosses its path.

OPENING THE DOOR TO PRODUCTIVITY

While your mobile workers may be able to access e-mail on the go, a truly wireless network allows for full network access and maximized productivity. We can help you build a multi-device management and enablement plan that covers all the necessary bases. First, you’ll need applications to transmit voice, data and video across the network. And to ease the strain on your time, wireless networking management software can provide centralized management. It can also report usage statistics and detect rogue access points – valuable information to assist with the planning and configuration of your wireless network. Now is also an ideal time to consider renegotiating or consolidating your multiple voice and data service providers. You can work the changes into your wireless network deployment and benefit from additional cost savings.

LEARNING TO SET BOUNDARIES

Broader reach brings broader risk, so as you take your network wireless, it’s more important than ever to have a comprehensive security solution. We can help make sure your plan keeps your network safe while still allowing for easy authorized access. Here are some elements to consider including:

- A Virtual Private Network (VPN) gives users secure remote access.
- Network Access Controls (NACs) review all users and systems attempting to access the network. If the user’s device is not compliant with security policies, access will not be granted until they are met.
- A key fob allows applications to be sent to an authenticated user. At the end of the session, no information remains on the end device.
- By informing your employees of possible threats and how to avoid them, you can help reduce the risks to your network.
WE GET IT. AND WE CAN HELP
YOUR NETWORK MEET YOUR NEEDS.

We know that it takes some doing to create a network that’s both accessible and secure. But we also know just how to do it. We’ll put together all the right elements to bring you a solution that works for your enterprise. Our experience has earned us the 2011 Cisco Partner Summit global award for National Collaboration Partner of the Year as well as the 2010 RSA Partner of the Year award, so you know you’re in good hands.

We’re here to help you every step of the way. In addition to assistance from a dedicated account manager, you’ll also get the support of industry-certified solution architects. They help make sure your specific requirements are met as you build your wireless network. We also offer a variety of services to help the implementation process go smoothly. From hardware configuration to broadband device activation, we can help ensure your new technology is ready when you are.

MEET PEOPLE WHO GET IT

JEFF G. — Inside Solution Architect, Security

I try to make sure I have a high-level understanding of my customers’ business requirements, as well as their technical needs. Security is more of a process than a product, and keeping this in mind throughout the design stage is critical. My customers come back to me multiple times in a year with new projects, and the better I comprehend their business objectives, the more effective the solution will be.

ANDY B. — Inside Solution Architect, Mobility

Regardless of the project at hand, we can offer resources to help from start to finish and even beyond project completion. For one customer, we were able to help deploy 1100 carrier-embedded notebooks. We activated each one with the wireless provider and provided the customer with all the information they would need for asset management. In the end, we helped them save countless hours and tens of thousands of dollars.
USE THE POWER OF OUR PARTNERSHIPS.

A SECURITY PARTNER OF MORE THAN 90% OF THE FORTUNE 500

RSA offers industry-leading solutions in identity assurance and access control, encryption and key management, compliance and security information, and fraud protection. They provide a wide range of user-authentication options that can help positively identify users before they interact with mission-critical data and applications. We are proud to be the RSA 2010 Partner of the Year.

AN INNOVATOR IN NETWORKING TECHNOLOGY

Providing network security for access control, threat management and compliance, Juniper products and technology run some of the world’s largest and most demanding global networks. They offer high security, performance, reliability and ease of management within their comprehensive portfolio. Your account manager can help you determine which Juniper products may be right for your network.

AWARD–WINNING NETWORK SECURITY SOLUTIONS

WatchGuard offers affordable, easy-to-use, secure remote access solutions. They provide connectivity to corporate data and resources, such as e-mail, file shares and customer relationship management. Their all-in-one appliances also offer desktop sharing features that allow your help desk to fix a remote employee’s computer problems, keeping them productive even out of the office. We can help you bring a unified approach to securing your network with products from WatchGuard.

A GLOBAL LEADER IN NETWORKING

Cisco hardware, software and service offerings help create solutions that increase productivity, improve customer satisfaction and strengthen competitive advantage. Their network infrastructure solutions let you deliver personalized, next-generation services and media experiences anywhere, anytime. We work closely with Cisco and are proud to have received the 2011 Cisco Partner Summit global award for National Collaboration Partner of the Year.
