

Symantec™ System Recovery 2011

Restore your system in minutes, anytime, anywhere

To sustain your operations, your business and even your brand, you need to recover from a system failure as quickly as possible. But manual system recovery processes and solutions that depend on user intervention prolong system downtime — and potential losses.

Symantec System Recovery 2011 offers a superior solution by delivering fast and reliable system recovery that helps you minimize downtime and meet recovery time objectives with confidence. In just four simple steps, quickly restore physical and virtual systems in minutes, even to bare metal, dissimilar hardware, virtual environments, or remote locations with Symantec's patented Restore Anywhere™ technology.

Built on 10 years of research and development and with more than 787,000 protected systems, Symantec System Recovery is one of the most proven, trusted, and reliable system recovery solutions.

“Before Symantec System Recovery it required four hours or more to perform a full system recovery. Now it takes less than 45 minutes.” Yaniv Dinar, IT and Infrastructure Manager, Starhome

Key Benefits

- Dramatically minimize downtime and avoid business disruption and financial loss by rapidly recovering complete systems in the event of a failure.
- Eliminates manual time consuming system recovery processes enabling you to meet your recovery time objectives with confidence.
- Perform a full system restoration to a specific point in time entirely from bare metal.
- Reduces the need for duplicate hardware for disaster recovery purposes.
- Backup systems automatically without disrupting user productivity.

- Reduce storage costs, backup windows and network traffic with integrated data reduction technologies.
 - NEW! Updated support for the latest Microsoft® Windows®, Linux®, VMware®, Microsoft Hyper-V™, and Citrix™ XenServer™ operating systems and applications.
-

Fast, Automated System Recovery and Flexible Restoration Options

- Quickly restore physical and virtual systems from local or off-site destinations in minutes, even to dissimilar hardware, remote locations, or virtual environments with Symantec's patented Restore Anywhere technology.
 - Off-site copy functionality enables you to automatically copy recovery points to external drives, network shares, or even remote FTP servers.
 - Easily restore a system from a remote location without physically visiting the system to perform the restore with Symantec's patented LightsOut Restore technology.
 - The fully customizable Symantec Recovery Disk auto-detects hardware and loads the appropriate drivers to boot the system resulting in faster recoveries.
 - Hot imaging combines with the ability to restore to different hardware platforms on the fly and breaks the barrier of incompatible storage controllers and hardware abstraction layers.
 - NEW! With new wizard functionality, create an all-in-one backup and recovery USB device to rapidly boot and recover your system.
 - NEW! Select an .ISO image as the source for a custom recovery disk.
-

Advanced Virtualization Capabilities

- Perform seamless and automated physical to virtual (P2V) and virtual to physical (V2P) conversions through

Data Sheet: Data Protection Symantec™ System Recovery 2011

an easy to use wizard driven interface for immediate system recovery.

- Automatically upload VMware virtual disk files (VMDK) converted from recovery points directly to VMware ESX® hosts.
- Simplifies testing and migrations—perform preflight testing of patches, application installations, configuration changes, or driver updates in a virtual environment before applying changes to production systems.
- Protect all virtual machines on a single hypervisor system using a single license of Symantec System Recovery Virtual Edition, reducing costs and simplifying the licensing of Symantec System Recovery in virtual environments.
- Support for the latest virtual environments including VMware, Microsoft Hyper-V, and Citrix XenServer.

Efficient Integrated Granular Recovery of Exchange, SharePoint, Files and Folders

- Quickly recover Microsoft Exchange mailboxes, folders, individual messages or attachments in seconds—without the need for mailbox backups.
- Easily recover SharePoint® documents from a single system recovery point.
- Restore files and folders in seconds with the ability to search multiple recovery points at the same time.
- The Symantec System Recovery Granular Restore Option is included at no additional charge.

Advanced Backup Scheduling and Security

- Integrated data reduction technologies, including SmartSector™ and compression, help speed up the backup process and reduce storage costs, backup windows and network traffic.

- Schedule backups to run automatically, including event-triggered backups, based on the parameters you specify without disrupting user or employee productivity.
- Capture a backup of a system in a pre-boot state, without having to install any software on the system with cold imaging technology.
- Capture and protect the entire system, including the operating system, applications, databases, all files, device drivers, profiles, settings, and registry or individual files and folders in one easy-to-manage recovery point.
- Easily schedule the conversion of physical recovery points (backups) to virtual systems.
- Back up selective files and folders on a separate schedule than a full system backup.
- Save recovery points to almost any disk storage device, including direct-attached storage; USB and FireWire drives and network storage; NAS and SAN devices and optical devices, CD, DVD and Blu-ray.
- Built-in AES software encryption of backups both in flight and at rest ensures the security of critical business data.

Scalable Centralized Management - Included at No Additional Charge

The intuitive user friendly interface, which incorporates automated best practice decision making and reporting, along with centralized management, designed to manage large numbers of Symantec System Recovery clients from a single management server, simplifies administration and saves valuable time, resources and money.

- Centrally deploy, configure and manage Symantec System Recovery across your organization.
- Create, edit and distribute backup jobs and client settings and client licensing policies.

Data Sheet: Data Protection Symantec™ System Recovery 2011

- Monitor the current protection status of all managed systems with the at-a-glance consolidated *Home Page* view.
- View real-time status of backup jobs with the ability to filter on computer name, job type, job name, and IP address.
- Quickly identify and drill down to problem areas via a powerful filtering system.
- Set default configuration settings for an individual system or groups of systems, including performance throttling, network bandwidth utilization, and notifications via email or SNMP traps.
- Centrally access computer details including volume name, size, amount and percentage of space used, file system type, and last recovery point time and location.
- Monitor local and network backup destination usage and historical trends.

Flexible, Powerful Reports

- Simplify the tracking of your environment with powerful preset reports.
- Export reports to .csv, .html, Excel® spreadsheet, or .xml formats for easy distribution.
- Easily view your past, current, and scheduled backup and recovery jobs.

Proven, Trusted, and Reliable

Symantec System Recovery protects more than 787,000 systems worldwide and is built on over 10 years of research, development and testing. From the world's #1 data protection and recovery leader, Symantec System Recovery continually wins awards including Windows IT Pro's 2010 Gold Community Choice award for best high availability/disaster recovery product and Redmond Reader's 2009 Choice award for best disaster recovery product.

Symantec System Recovery 2011 Portfolio

Symantec System Recovery 2011 complements your existing data backup and recovery solution providing seamless and automated system recovery for complete data and system protection. The Symantec System Recovery 2011 portfolio includes the following editions:

- Desktop Edition
- Small Business Server Edition
- Server Edition
- Virtual Edition
- Linux Edition
