

Date: August 27, 2004
 Name of Product: ClearCube RSeries Blade Solution (Desktop Computer)
 Contact for more Information: Matthew R. Gray, Sr. System Engineer

**Section 1194.21 Software Applications and Operating Systems – Detail
 Voluntary Product Accessibility Template**

Criteria	Supporting Features	Remarks and Explanations
(a) When software is designed to run on a system that has a keyboard, product functions shall be executable from a keyboard where the function itself or the result of performing a function can be discerned textually.	Supports.	We use confirmation messages for functional commands that are entered into the utility. This gives the user the ability to access all the features and functions within the application using either a keyboard or other input device.
(b) Applications shall not disrupt or disable activated features of other products that are identified as accessibility features, where those features are developed and documented according to industry standards. Applications also shall not disrupt or disable activated features of any operating system that are identified as accessibility features where the application programming interface for those accessibility features has been documented by the manufacturer of the operating system and is available to the product developer.	Supports.	ClearCube's Management Suite does not alter the features and functions used for disabled persons. The Management Suite does not adversely affect any of the accessibility features of the OS.
(c) A well-defined on-screen indication of the current focus shall be provided that moves among interactive interface elements as the input focus changes. The focus shall be programmatically exposed so that Assistive Technology can track focus and focus changes.	Supports	ClearCube's Management Suite uses alt text elements to indicate a selected item.
(d) Sufficient information about a user interface element including the identity, operation and state of the element shall be available to Assistive Technology. When an image represents a program element, the information conveyed by the image must also be available in text.	Supports	The elements that are used within the utility applications use graphical and textual labels for each item.
(e) When bitmap images are used to identify controls, status indicators, or other programmatic elements, the meaning assigned to those images shall be consistent throughout an application's performance.	Supports	

<p>(f) Textual information shall be provided through operating system functions for displaying text. The minimum information that shall be made available is text content, text input caret location, and text attributes.</p>	<p>Supports</p>	
<p>(g) Applications shall not override user selected contrast and color selections and other individual display attributes.</p>	<p>Supports</p>	<p>All the utility applications poll the OS for any color, contrast and font characteristic selections.</p>
<p>(h) When animation is displayed, the information shall be displayable in at least one non-animated presentation mode at the option of the user.</p>	<p>Not Applicable</p>	<p>There is no animation in any of the utility applications.</p>
<p>(i) Color coding shall not be used as the only means of conveying information, indicating an action, prompting a response, or distinguishing a visual element.</p>	<p>Supports</p>	<p>We use color coding and screen labels for all functions (i.e. Switch Manager's Modes).</p>
<p>(j) When a product permits a user to adjust color and contrast settings, a variety of color selections capable of producing a range of contrast levels shall be provided.</p>	<p>Not Applicable</p>	<p>None of the Management Suite applications allows the users to change color or contrast points.</p>
<p>(k) Software shall not use flashing or blinking text, objects, or other elements having a flash or blink frequency greater than 2 Hz and lower than 55 Hz.</p>	<p>Not Applicable</p>	<p>None of the Management Suite applications use flashing or blinking text, objects or other elements.</p>
<p>(l) When electronic forms are used, the form shall allow people using Assistive Technology to access the information, field elements, and functionality required for completion and submission of the form, including all directions and cues.</p>	<p>Supports</p>	<p>The ClearCube Management Suite will take all inputs from devices connected to the USB or PS2 connections.</p>
