

# Riverbed SteelCentral

PERFORMANCE MANAGEMENT AND CONTROL

## Overview

Riverbed® SteelCentral™ is the only end-to-end solution that combines user experience, application, and network visibility to detect and resolve issues before end users notice. Riverbed delivers visibility, analytics, and insight empowering companies to leverage IT to innovate and differentiate from the competition. SteelCentral drastically reduces the time and effort required to develop, deploy, and ensure application performance.

## SteelCentral Featured Offerings

### Performance Management

[SteelCentral AppResponse](#)

AppResponse integrates application and network performance management to deliver real-time application performance monitoring based on actual end-user experience.

[SteelCentral AppInternals](#)

SteelCentral AppInternals combines end user experience monitoring and end to end transaction monitoring together with the power of Big Data Analytics for market-leading capabilities for Java, Microsoft .Net, web, virtual, cloud, and big data applications.

[SteelCentral NetShark](#)

Troubleshoot network activity in real time with the always-on SteelCentral™ NetShark. It quickly captures, indexes, and stores all data packets without the need for file transfers.

[SteelCentral Packet Analyzer](#)

Graphical console for high-speed packet analysis

[SteelCentral NetProfiler](#)

Network reporting and analytics provide a view into the end-to-end health of your network. Available in a variety of form factors/models, including appliances and virtual software

### Central Management and Control

SteelCentral Controller for SteelHead

Simplify and manage your SteelHead WAN optimization deployments using a central web interface

SteelCentral Controller for SteelHead Mobile

Manage Riverbed SteelHead™ Mobile licenses and control the deployment, management, and reporting of SteelHead Mobile client software.
